

Purpose and Overview

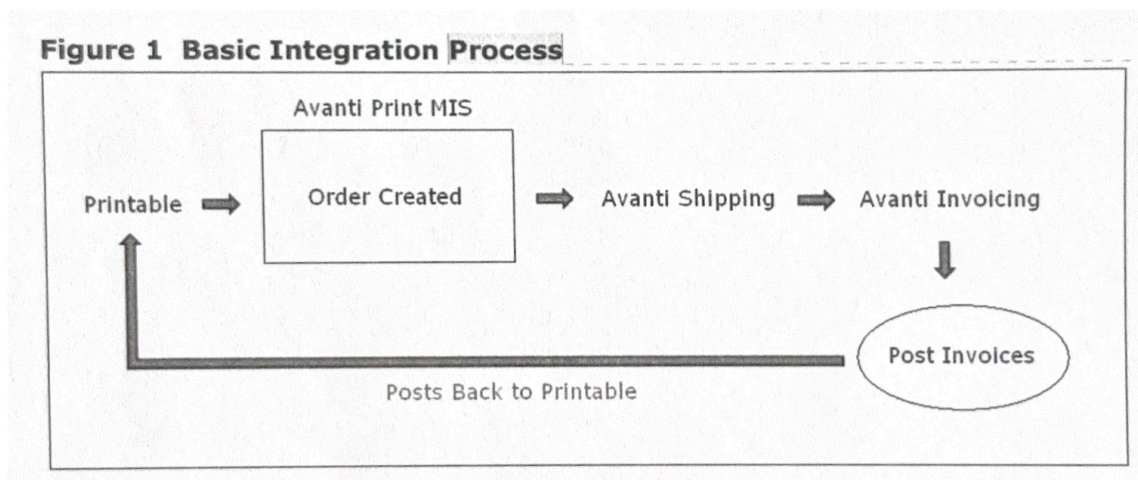

The purpose of this guide is to describe how to integrate Printable Dashboard with Avanti Print MIS. Printable Dashboard is a leading provider of online ordering systems.

Overview

Using a correctly mapped XML file, jobs can be added to the Avanti system via the Printable store front. Each submitted job will have a Printable External ID code associated with it, so when it is invoiced, the Printable Closeout system will pass invoice and shipping information back to Printable for closeout purposes.

The Printable integration consists of the following:

- * Order Integration
- * Closeout Integration
- * Inventory Integration

The process is as follows:

1. Customer accesses the Printable store front and orders a product or products.
2. The order details are imported into Avanti via the mapped XML file.
3. The order is shipped and invoiced in Avanti.
4. The invoice is posted back to Printable.
5. Printable closes out the order.

Services Used

Avanti uses Printable's Closeout and Inventory services. The Closeout service allows Avanti to pass back invoicing and shipping information to Printable in order to close out any orders created on the store front website.

The inventory service runs once a day (e.g., during the evenings) and looks through all items in Avanti identified as Printable, then sends over the current on-hand amount. This ensures that inventory quantities match between Printable and Avanti.

Before you Begin — Checklist

- * Printable token used by the client to interact with the Printable website (supplied by Printable)
- * Printable Closeout Web Service URL (supplied by Printable)
- * A working IIS server
- * An outside IP address
- * An XML mapper file

Prerequisites

- * Avanti Print MIS version 12.0 installed
- * Working knowledge of the XML mapping process

* Working knowledge of the following Avanti modules:

- Order Entry
- Shipping
- Invoicing

In addition, Printable requires the following information:

- * The Avanti customer code for the store front ordering system. This customer code is used to create orders in Avanti for a specified customer (one customer code per store front).
- * List of the Avanti Inventory item numbers and the matching Printable Inventory IDs.
 - Numeric and alpha-numeric characters
 - Up to a maximum of 16 characters for Inventory items
 - Up to a maximum of 32 characters for the Customer Item number
- * List of the Avanti product codes and the matching Printable Product ID.
 - Up to a maximum of 16 characters
- * Valid Printable tokens. A token refers to an access token. It contains the security information for a login session and identifies the user. Printable provides these token in order to allow access to their web services.
